TECHNOVA 2026

College Fest Website – Project Explanation

A page-by-page explanation of the website features, event information, registration flow, and visual design based on the supplied screenshots.

Project overview

TECHNOVA 2026 is presented as a two-day college festival that combines technical competitions, skill-building workshops, and cultural performances. The website acts as an information hub where students can learn about activities, check the event schedule and venues, review participation rules, find coordinators, and access a registration form.

Main objective: To make fest information easy to access and help students understand what is happening, when it is happening, where it will take place, and how to register.

1. Website structure and navigation

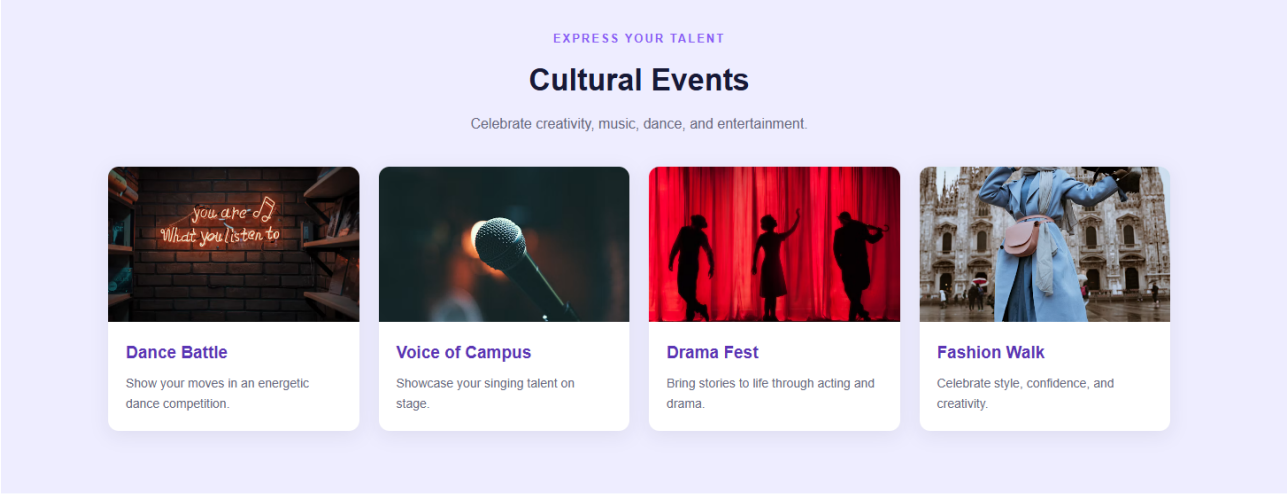

The home page navigation provides links to the major areas of the website. Each section serves a specific purpose in the participant journey.

Section	Purpose
Home	Introduces TECHNOVA 2026 and highlights coordinators and rules.
Technical	Displays technology-focused competitions and project activities.
Cultural	Displays creative and performance-based events.
Workshops	Promotes sessions where students can learn practical skills.
Schedule	Shows event days, times, names, and venues in a table.
Register	Collects student details and the event they want to join.

2. Page-by-page explanation

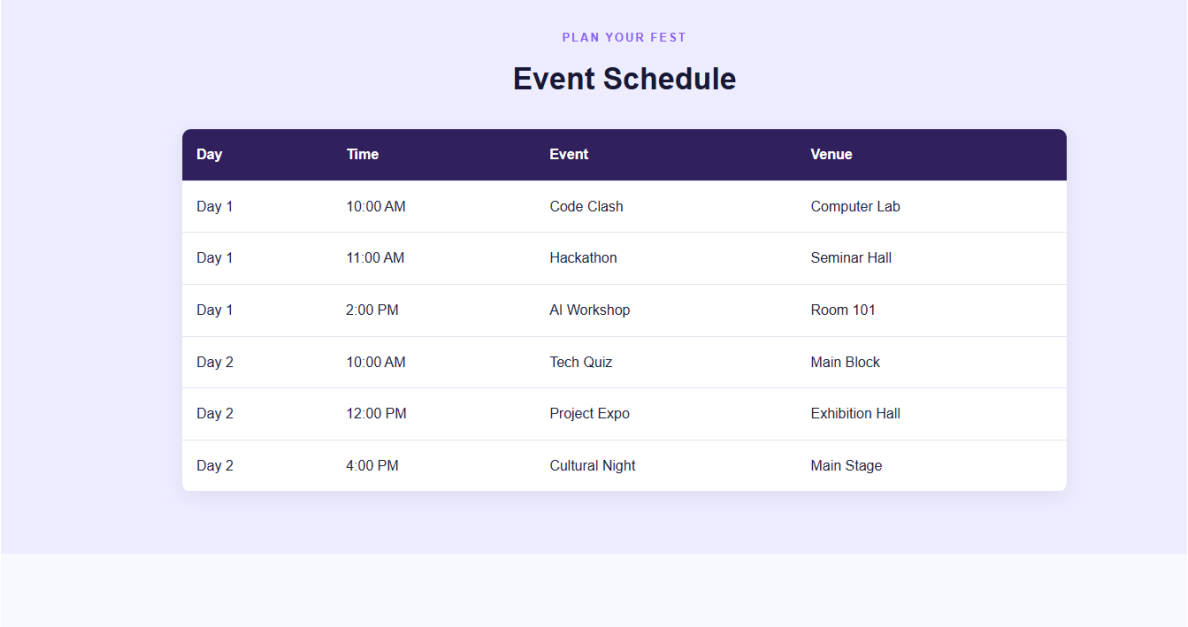

1. TECHNOVA 2026 home page

The home page introduces TECHNOVA 2026 as an annual college fest where technology and creativity come together. A top navigation bar links visitors to Home, Technical, Cultural, Workshops, Schedule, and Register. The hero area welcomes visitors, briefly describes the fest, and provides a Register Now button. The page also presents event coordinators and a rules-and-regulations section, followed by a footer.

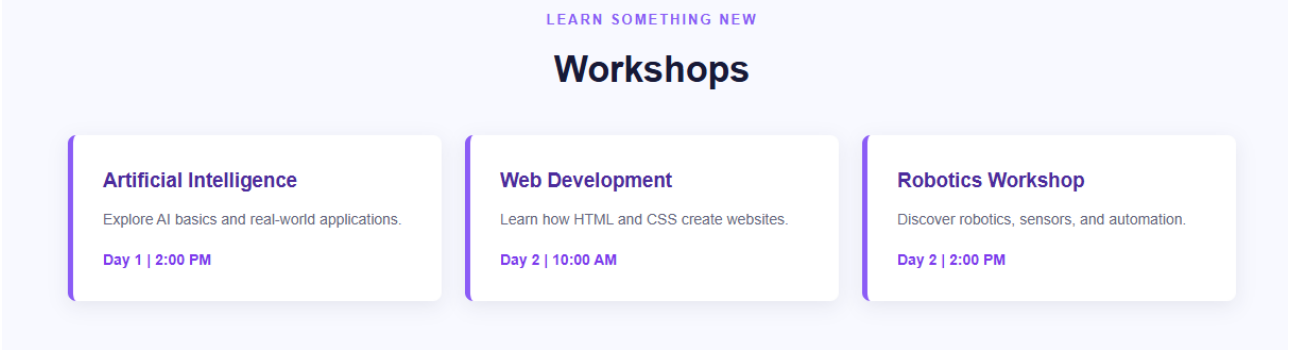

2. Technical events

This section highlights activities that test technical knowledge, programming ability, teamwork, and innovation. The visible event cards are Code Clash, Hackathon, Tech Quiz, and Project Expo. Each card includes an image, a short description, and its scheduled day and time. For example, Code Clash is listed for Day 1 at 10:00 AM, while Project Expo is listed for Day 2 at 12:00 PM.

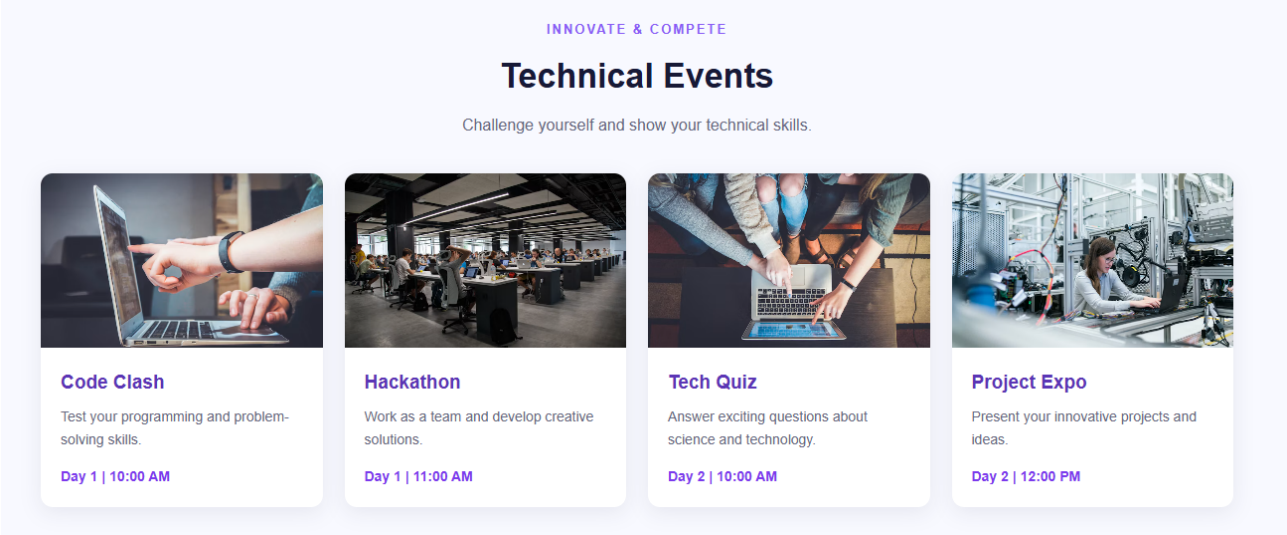

3. Workshops

The workshops section advertises learning sessions intended to help students develop practical skills. The three visible sessions are Artificial Intelligence, Web Development, and Robotics Workshop. Each card contains a brief description and a day/time label, helping participants decide which session to attend.

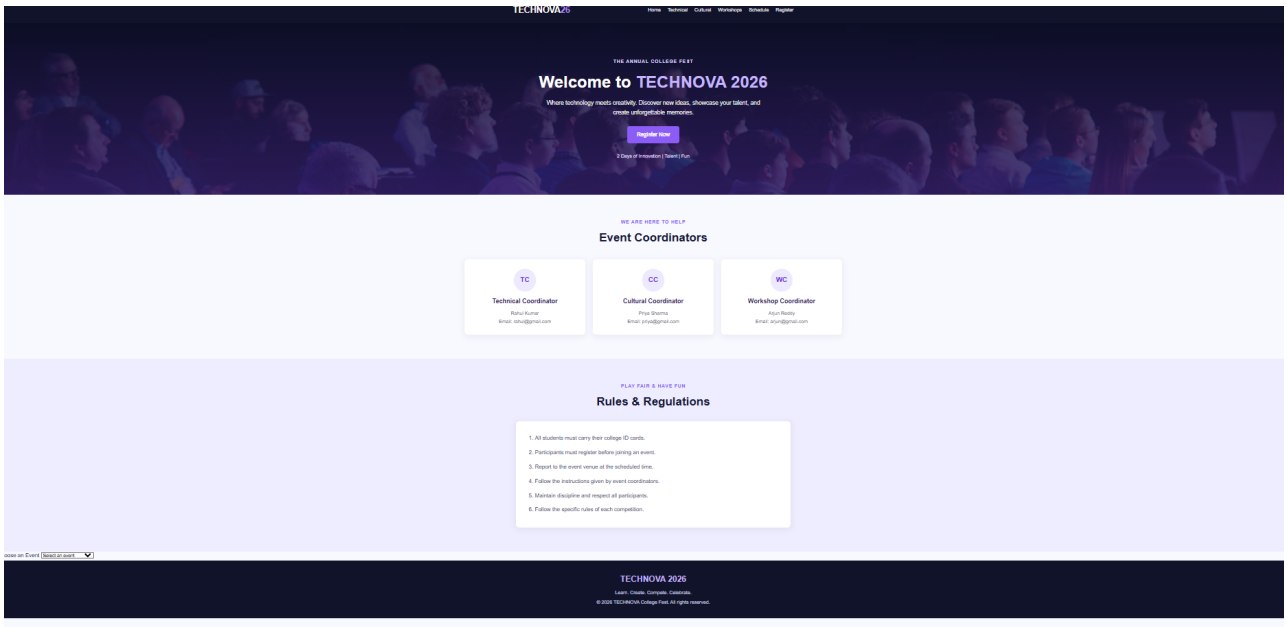

4. Event schedule

The schedule presents event timings and venues in a structured table. It includes columns for Day, Time, Event, and Venue. The displayed entries cover Code Clash, Hackathon, AI Workshop, Tech Quiz, Project Expo, and Cultural Night across two days. This page helps participants plan their activities and reach the correct venue.

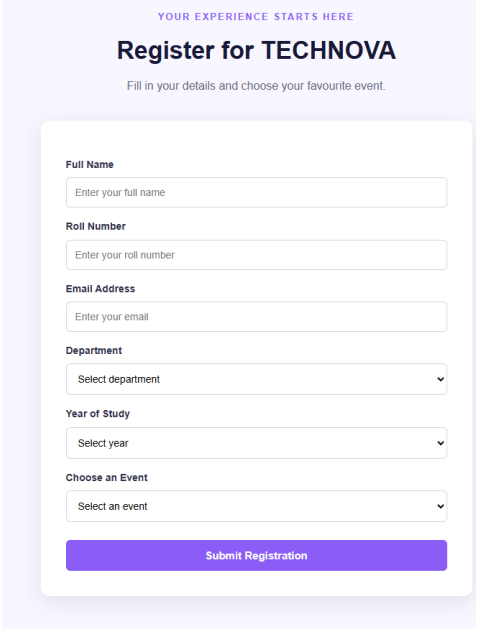

5. Registration form

The registration page allows a student to enter Full Name, Roll Number, and Email Address, then select a Department, Year of Study, and preferred Event. The Submit Registration button is the main call to action. These fields are intended to collect participant details and associate each student with an event. The screenshot shows the form layout; it does not by itself confirm how submissions are stored or processed.

6. Cultural events

The cultural events section focuses on performance and creative activities. The visible cards are Dance Battle, Voice of Campus, Drama Fest, and Fashion Walk. Images and short descriptions communicate the nature of each activity and encourage students to participate in dance, singing, acting, and fashion-related performances.

3. Event information at a glance

The screenshots show a mix of competitions, workshops, and cultural activities. The following table summarizes the visible event names and the times shown in the interface. Where a time is not visible on the event card, it is marked as not shown there.

Category	Event / session	Day and time shown
Technical	Code Clash	Day 1 – 10:00 AM
Technical	Hackathon	Day 1 – 11:00 AM
Technical	Tech Quiz	Day 2 – 10:00 AM
Technical	Project Expo	Day 2 – 12:00 PM
Workshop	Artificial Intelligence	Day 1 – 2:00 PM
Workshop	Web Development	Day 2 – 10:00 AM
Workshop	Robotics Workshop	Day 2 – 2:00 PM
Cultural	Dance Battle	Not shown on card
Cultural	Voice of Campus	Not shown on card
Cultural	Drama Fest	Not shown on card
Cultural	Fashion Walk	Not shown on card
Schedule	Cultural Night	Day 2 – 4:00 PM

Schedule note: The schedule table lists AI Workshop at Day 1, 2:00 PM, while the workshop cards show the Artificial Intelligence session at the same time. The schedule and cards should be kept synchronized if event timings are changed.

4. Registration process

A participant is expected to open the Register page, enter their name, roll number, and email address, choose their department and year of study, select an event, and submit the form. A useful registration implementation should validate required fields, check that the email address is correctly formatted, prevent accidental duplicate submissions, and display a clear success or error message.

5. Coordinators and rules

The home page includes an Event Coordinators area with separate contacts for the Technical, Cultural, and Workshop teams. This gives participants a point of contact for questions about the relevant activity. The Rules & Regulations area communicates expectations such as carrying a college ID, registering before joining an event, reporting to the venue on time, following coordinator instructions, maintaining discipline, and observing event-specific rules.

6. Design and user experience

Colour scheme: The pages use pale lavender and off-white backgrounds, dark navy text, white content cards, and purple accents. This creates a clean, modern appearance while giving headings, borders, and buttons a consistent highlight colour.
Content cards: Event and workshop cards combine images, titles, descriptions, and timing information. This makes the content quick to scan.
Schedule table: A table provides a compact way to compare days, times, activities, and venues.

Registration form: Clearly labeled input fields and dropdowns guide participants through the details required to register.

7. Suggested improvements

- Make every navigation link and registration button work correctly on desktop and mobile.
- Add form validation and a registration confirmation message or receipt.
- Connect registrations to a secure database or approved event-management system if online submission is required.
- Add event capacity, eligibility, fees (if any), and registration deadlines where relevant.
- Ensure all event times and venues match across cards and the schedule table.
- Add contact links for coordinators, accessible labels, keyboard support, and alternative text for images.
- Make the layout responsive so cards, tables, and forms remain readable on phones.

8. Conclusion

TECHNOVA 2026 is designed as a central information website for a college fest. It brings together technical competitions, cultural activities, workshops, a two-day schedule, coordinator information, participation rules, and student registration. The screenshots demonstrate a consistent visual style and a clear structure for guiding students from discovering the fest to choosing and registering for an event.

This report is based on the six supplied screenshots. It explains the visible interface and describes recommended implementation practices; it does not assume that unseen database, authentication, or form-processing features are already implemented.
